

José Miguel Torres Hernández

Senior Software Engineer | AI Enablement, Backend, Full-Stack, Secure Delivery

Valencia, Spain · Tel. · available on request · jmtrs@proton.me · linkedin.com/in/jmtrs · github.com/jmtrs

PROFILE

Senior Software Engineer with 10+ years of experience across product engineering, backend, full-stack delivery and APIs. Strong Java and Spring Boot foundation, complemented by Node.js, NestJS, Python, FastAPI, React, Next.js, Vue, Angular, TypeScript, GraphQL and Rust-oriented tooling.

I combine enterprise software delivery with Secure SDLC, Application Security, mentoring and developer productivity improvements. I apply LLM-assisted development, AI coding workflows, automation, documentation and repository instructions to help teams move faster without losing technical control, and I also work with Rust tooling and cross-platform desktop apps when it adds value.

KEY STRENGTHS

- **Backend and APIs:** Service, integration and enterprise delivery work with a strong backend core.
- **Full-stack delivery:** Ability to cover backend, frontend and APIs across the full software lifecycle.
- **AI enablement:** Practical LLM-assisted workflows, AI coding workflows and documentation support for engineering teams.
- **Secure delivery:** Secure SDLC, AppSec, mentoring, automation and production readiness.

TECHNICAL STACK

Backend: Java, Spring Boot, Node.js, NestJS, Python, FastAPI, REST APIs, GraphQL.

Frontend: React, Next.js, Vue, Angular, TypeScript, Apollo GraphQL.

Delivery: CI/CD, Docker, Kubernetes, AWS (EKS), Azure (AKS), GCP (GKE), observability, testing, release support.

Security: Secure SDLC, Application Security, authentication, authorization, code reviews.

AI & Tooling: LLM-assisted development, AI coding workflows, developer productivity, automation, repository instructions, Rust-oriented tooling, cross-platform desktop apps, GitHub Copilot, Cursor, Claude Code, Claude, GPT-4o, Llama.

PROFESSIONAL EXPERIENCE

Senior Software Engineer · SNGULAR · Remote

Jul 2021 - Present

Senior backend and full-stack role across enterprise software delivery, secure engineering, technical enablement and practical AI adoption.

- Design and deliver enterprise software across backend and full-stack contexts, building Java and Spring Boot services, APIs, frontend integrations and platform-oriented components for demanding business environments.
- Contribute with Node.js, NestJS, Python and FastAPI when product and client needs require it, while keeping a pragmatic focus on architecture, maintainability and code quality.
- Own complete delivery slices: technical design, implementation, testing, code reviews, documentation, CI/CD, release support and production readiness.
- Strengthen secure delivery through authentication, authorization, Secure SDLC, Application Security reviews and operational risk reduction.
- Drive technical enablement and developer productivity through mentoring, onboarding material, reusable documentation, repository instructions and team-facing engineering standards, reducing onboarding friction and accelerating AI coding workflow adoption across teams.
- Apply practical AI enablement with LLM-assisted development, AI coding workflows, automation and documentation support to improve productivity without losing technical control.
- Built internal Rust tooling for CLI and developer workflow automation, complemented by additional work on tooling and cross-platform desktop apps outside the main role context.

PROFESSIONAL EXPERIENCE

Frontend Developer · nexum AG

Mar 2019 - Jul 2021

- Built production frontend applications with React, Next.js and TypeScript for projects such as thesting.com and manor.ch, focusing on maintainability, performance and clean implementation.
- Delivered Next.js migrations and implementations with Apollo GraphQL integration, achieving roughly ~2 s loading improvements while strengthening SEO and user experience.
- Translated product and UX requirements into maintainable interfaces, collaborating with backend and product teams on web architecture decisions.

Freelance Web Developer · Independent Projects

2015 - 2019

- Parallel freelance activity between 2015 and 2019, alongside academic work and the transition into full professional environments.
- Delivered end-to-end web projects covering implementation, deployment, client communication, CMS customization and iterative improvements for multiple clients.
- Worked across frontend and backend with React, Redux and REST APIs; C# with ASP.NET and PHP with WordPress, Joomla and Laravel, including CMS customization, SEO, performance, migration and PWA-oriented improvements.

SELECTED TECHNICAL FOCUS

- **AI enablement and developer productivity:** LLM-assisted development, AI coding workflows, automation, documentation and repository instructions applied in practical delivery contexts.
- **Backend and APIs:** Java, Spring Boot, Node.js, NestJS, Python, FastAPI, REST APIs and GraphQL for product-oriented execution.
- **Secure delivery:** Secure SDLC, authentication, authorization, Application Security, code reviews and production readiness.
- **Rust, tooling and desktop:** Rust CLI and automation work, plus selective cross-platform desktop app work as a complementary capability.

EDUCATION, CERTIFICATIONS & LANGUAGES

Education: Bachelor's Degree in Software Engineering and Information Technology. Universidad Miguel Hernández de Elche, 2012 - 2018.

Certifications:

- PSM I · Professional Scrum Master, Scrum.org, Nov 2025
- Vault Fundamentals · Thought Machine, Mar 2022

Languages:

- Spanish · Native
- English · B2, professional working proficiency
- Valencian · Elementary, JQCV
